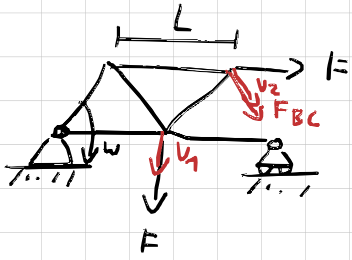
1. $F_{Ax} = F \quad , F_{Ay} = F\left(\frac{1}{2} - \frac{\sqrt{3}}{4}\right)$

2.



$v_1 = wL$

$v_2 = w \cdot L \cdot \sqrt{\left(\frac{3}{2}\right)^2 + \left(\frac{\sqrt{3}}{2}\right)^2}$

$= w \cdot L \cdot \sqrt{3}$

$P_{tot} = wLF + wL \cdot \sqrt{3} \cdot \frac{1}{2} F + wL\sqrt{3} \cdot F_{BC} = 0$

$F_{BC} = \frac{F}{\sqrt{3}}\left(-1 - \frac{\sqrt{3}}{2}\right) = F\left(-\frac{1}{\sqrt{3}} - \frac{1}{2}\right)$
